

PAREXEL® CLINICAL RESEARCH SERVICES:
CLINICAL TRIAL SUPPLIES & LOGISTICS

CLINICAL TRIAL SUPPLIES

A global leader providing flexible
distribution services

PAREXEL'S CLINICAL TRIAL SUPPLIES OFFERS:

- Proactive project management to drive the success of your project
- Planning and forecasting services to optimize clinical trials supply strategy
- Management of IMP and medical device manufacturing
- Local and central comparator product sourcing
- Clinical packaging and labeling services
- GMP temperature-controlled storage and distribution from our global depot network
- Inventory control, returns, destruction, and final clinical trial supply reconciliation
- EU Gateway services and Qualified Person release
- Global trade compliance (import/export) and regulatory support
- Complete supply chain visibility through eLogistics capabilities

The growing complexity and global reach of clinical trials have created increasing challenges for sponsors to manage and optimize their clinical supply chain.

PAREXEL takes an integrated approach to managing and simplifying all aspects of medical and non-medical supplies, ancillary supplies and laboratory logistics. Leveraging more than 30 years' experience as a trusted partner for the complex development journey required of biopharmaceutical and medical device companies, PAREXEL serves as your single point of contact for end-to-end clinical trials supply management and global clinical logistics.

DEFINING CLINICAL TRIALS SUPPLIES AT FEASIBILITY AND PLANNING

PAREXEL offers the expertise to begin planning your clinical trials supply sourcing and distribution strategy the moment you begin your program. We take a proactive approach to ensure strategic planning and execution is integrated into the entire trial process, helping you balance the cost of Investigational Medicinal Products (IMPs), delivery logistics and storage, ensuring your project runs lean while ensuring treatment and supply continuity.

PAREXEL®
YOUR JOURNEY. OUR MISSION.™

PAREXEL SIMPLIFIES END-TO-END GLOBAL CLINICAL LOGISTICS BY:

- Providing proactive clinical logistics leadership
- Accelerating site readiness
- Ensuring continuity of supply
- Creating business intelligence
- Optimizing your supply chain

INTELLIGENT eLOGISTICS SOFTWARE PROVIDES

**full clinical supply chain transparency,
and enables us optimized inventory
control across our depot network**

continued from previous page...

Whether you are a large, global company with decades of experience, or an emerging biotechnology company with no in-house ancillary supply expertise, PAREXEL's capabilities in Clinical Trial Supplies can help you plan and execute your entire clinical trials supplies process to make it more efficient and cost effective.

STRATEGIC COMPARATOR SOURCING— CENTRALLY OR LOCALLY

Every clinical trial is unique. As a result, there is no “one-size fits all” approach to the sourcing, manufacturing and distribution of clinical trial supplies. During the planning process, PAREXEL's experts in Clinical Trial Supplies will tailor a sourcing strategy that is efficient, robust and compliant with all applicable regulations and can provide local and central sourcing of comparator and non-IMP products.

By working with PAREXEL as your single source of clinical trials supplies, you increase patient safety by avoiding the use of counterfeits or medications that have expired, increase regulatory compliance, and ensure treatment is available at the right place at the right time to the right quality.

MANUFACTURING AND PACKAGING

PAREXEL's Clinical Trial Supplies & Logistics group coordinates the sourcing of investigational medicinal product (IMP) manufacturing to optimize material utilization, supply and re-supply strategies, expiration dates and costs.

PAREXEL also offers full-service secondary clinical packaging for randomized, double-blind studies. We can provide customized packaging design, custom secondary packaging and patient kits. In addition we also routinely develop, translate and distribute all the documentation for sites, investigators and patients.

GLOBAL DISTRIBUTION SOLUTIONS

PAREXEL has 55 strategically located depots designed specifically for clinical research and operates facilities to store and distribute clinical trial supplies. Audited by both our clients and our internal quality assurance teams, these depots are located throughout North America, Latin America, Europe, Africa and the Asia Pacific Region.

In many regions, PAREXEL's Clinical Trial Supplies staff serve as importer of record. We enable the import of IMP from non-EU regions with our Qualified Person (QP) release services. PAREXEL's global footprint and expertise enables us to manage your project no matter where your clinical sites and patients are located.

EXTENSIVE GLOBAL TRADE COMPLIANCE AND REGULATORY EXPERIENCE

As a global leader in conducting clinical trials, PAREXEL understands the importance of assuring clinical trials supplies reach patients on a timely basis and comply with local regulatory requirements.

PAREXEL's Clinical Trial Supplies provides global trade compliance expertise, including customs (import/export) clearance, and a first-hand understanding of the regulatory requirements in your target countries.

As a result, you benefit from increased protocol compliance, increased sample integrity, increased regulatory compliance (GCP/GDP/GMP), and the peace of mind that comes with knowing your medications will reach your patients.

WORLD-LEADING CLINICAL TRIALS SUPPLIES EXPERTISE ON YOUR TEAM

PAREXEL is a global leader in clinical trials supplies. Our flexible regional distribution services can serve small regional studies and complex global trials, and can be scaled for entire development programs. We execute distribution according to standard operating procedures (SOPs) designed to accelerate project setup, decrease turnaround times and minimize supply chain issues.

PAREXEL'S CLINICAL TRIALS SUPPLIES & LOGISTICS: STRATEGICALLY, GLOBALLY INTEGRATED

For more than 30 years, PAREXEL has been a trusted partner for the complex development journey required of biopharmaceutical and medical device companies.

For the past ten years, PAREXEL's Clinical Trial Supplies & Logistics group has provided high-quality, centralized coordination of clinical trial supplies, central lab services, and ancillary supplies. Available individually or in any combination, PAREXEL's Clinical Trial Supplies & Logistics group assures that your medications reach your sites and your patients on time.

ACCELERATING SITE READINESS THROUGH STORAGE AND INVENTORY CONTROL

With the increasing pressure to deliver clinical studies faster and more efficiently, it is essential that your IMP is not on the critical path for startup of your clinical sites. PAREXEL's Clinical Trial Supplies systems, processes and global depot network enable us to have the right products in the right place at the right time. Our intelligent eLogistics software provides full clinical supply chain transparency, and enables us optimized inventory control across our depot network.

RETURNS AND RECONCILIATION

Too often returns and reconciliation activities can be an after-thought. In the rush to get sites up and running and achieve First Patient In (FPI), returns and reconciliation can seem unimportant. At PAREXEL we believe that time spent proactively planning these activities brings significant efficiencies. That's why we take an end-to-end approach to the design of your clinical supply chain ensuring your project is delivered on time and within budget with no nasty surprises at study closure.

CLINICAL SUPPLY CHAIN ANALYTICAL INSIGHTS: ONLY BY PAREXEL

PAREXEL's analytics gives you unparalleled visibility and control over your supply chain. Our state-of-the-art eClinical and eLogistics solutions enable tracking of supplies from manufacturer to destruction, and provide insight into operational supply chain performance. Combined with PAREXEL's clinical trial supplies and logistics expertise, our analytic solutions allow you to build supply chain intelligence that can be used to anticipate issues, develop solutions and implement actions to optimize supply levels, reduce costs and enhance future trials.
