

ADDRESSING TODAY'S NEEDS AND TOMORROW'S CHALLENGES

Key Features

- A cloud solution offered by PAREXEL in alliance with Microsoft, built on Azure, an open, enterprise-grade, secure cloud computing platform
- Support for digital transformation for life sciences companies by world leaders in biopharmaceutical services and technology, on a global cloud infrastructure
- A roadmap for jointly developed, innovative patient-centric technologies and cloud-based services to support clinical research and market access

Key Benefits

- Helping accelerate the drug development lifecycle to shorten time-to-treatment and improve Return on Investment
- Clinical trial and regulatory efficiencies through workflows optimized for a seamless user experience and
- Support for adaptive trials for on-the-fly adjustment as results evolve
- Enhanced performance and innovation by breaking down product silos
- Faster response to changing market demands with a flexible, scalable architecture
- Predictable costs and maintenance with built-in upgrades
- Simplified data integration through a common architecture

There is no question about the need for life science organizations to embrace digital transformation. Biopharmaceutical companies must simplify processes and shorten the development lifecycle, in order to deliver on the promise of providing treatments that can save lives and improve human well-being. Today, many processes are opaque and inefficient, costs are astronomical, and misalignment between technology, people and processes impedes timely response to changing market demands.

However, for many companies, the lack of a clear way forward has hindered progress. What is the starting point? What are the resources and costs required over the short and long term? The landscape of providers and applications can be daunting. How will technology suppliers ensure data integrity and security through migration from legacy systems? The list goes on.

AN ALLIANCE BETWEEN PAREXEL AND MICROSOFT IN SUPPORT OF LIFE SCIENCES

These concerns can now be allayed by PAREXEL's newest offering – Perceptive® Cloud. Born out of the alliance between PAREXEL and Microsoft, this new cloud solution brings together one of the leading global biopharmaceutical services organizations, with the world's largest software company in support of transforming the life sciences industry.

Perceptive® Cloud elevates PAREXEL Informatics' solutions into an enhanced cloud architecture built on Microsoft Azure, combining PAREXEL's extensive biopharmaceutical industry expertise and innovative technology solutions, with the power of Microsoft Azure's intelligent cloud services and investment in global compliance certifications and enterprise-grade security. The Perceptive Cloud helps streamline processes, improve transparency and promote

collaboration. Workflows are optimized for a seamless user experience. The flexible, open, scalable architecture simplifies data integration and enables faster response to changing market demands.

FULL SECURITY AND PROTECTION FOR SENSITIVE INFORMATION

Perceptive® Cloud is designed to respond to the need to deliver cost-effective innovation while safeguarding sensitive information, no matter where drug development activities are conducted, while ensuring that data is properly managed and protected. Perceptive® Cloud represents a true breakthrough. The solution affords an opportunity for those developing drugs to experience the enhanced data quality and availability needed to improve and redefine processes from discovery through commercialization.

THE WAY FORWARD, BEGINNING TODAY

The solution enables life science companies to begin the digital transformation journey without delay, with confidence in the providers, the data security and the predictability that is the hallmark of the cloud computing model. Costs can be forecast over time thanks to the software-as-a service model, with maintenance and upgrades built into the architecture. New features are introduced on an accelerated schedule.

A ROADMAP FOR THE FUTURE

Focused on a shared commitment to transform the life sciences industry, PAREXEL and Microsoft aim to jointly develop innovative, site- and patient-centric technologies as well as cloud-based services to support the complete clinical and regulatory lifecycle for global clients. Specifically, the alliance aims to enhance patient engagement and make participation in clinical trials more accessible, helping the industry deliver on the promise of precision medicine.

ABOUT PAREXEL

PAREXEL® Informatics provides innovative technology solutions to help optimize patient engagement, clinical and regulatory processes. The integrated solutions are designed to improve how biopharmaceutical companies perform clinical trials, control and share data, track and report patient outcomes, manage regulatory information worldwide, and capture real-world evidence for payers.

ABOUT MICROSOFT AZURE

Microsoft Azure is an open, flexible, enterprise-grade cloud computing platform and set of services. Businesses looking to digitally transform with Microsoft Azure benefit from Microsoft's more than \$1 billion investment in security research per year, an industry-leading cloud regulatory compliance portfolio, and global scale that includes 42 datacenter regions announced, more than any other cloud provider.
