PAREXEL is a leading, global Clinical Research Organization that is continually growing. As part of our global talent strategy, we partner with numerous universities to share our passion for making a difference and to educate students about this exciting industry.

Our university partners allow us to engage top talent through job fairs, day visits, classroom presentations, open business days, study course work assistance, interview days and sharing of industry-related hiring trends. Applicable areas of study include: life sciences, pharmaceutical sciences, biotechnology, statistics, computer science and clinical research.

As a result of these joint efforts, PAREXEL hires students into a variety of positions, such as: interns, co-ops, dual study course students, placements, temps, trainees and associates in rotational development programs. Whichever opportunity students enter, PAREXEL is committed to supporting each individual with leading-edge technology, the highest caliber team members, and managers to help enhance their skills.

PAREXEL is focused on technical excellence and quality, and is always looking to add university partners who share this common goal. If you are an organization that would like to work with PAREXEL to merge academic knowledge with practical application, please contact us.
